0.3mm Contact Pitch, 1.25mm above the board, Flexible Printed Circuit Connectors

FH 23 Series

Features

1. FPC low insertion force and high holding force Hirose Electric's unique low insertion force (LIF) design

(patents pending) improves the Flexible Printed Circuit (FPC) holding force after insertion.

2. Temporary hold of FPC

There is no need to hold the FPC after insertion in the connector. The connector will hold it in correct position, allowing closing of the actuator.

3. Easy board mounting

The surface mounted termination of the contacts is staggered on 0.6 mm centers, positioned on front and back of the

Bottom of the connector is completely insulated, allowing conductive traces on PCB to run under the

4. Proven Flip-lock Actuator assures easy and reliable operation

Rotating actuator permits easy insertion and reliable connection with the FPC. Tactile sensation confirms complete mechanical locking of the actuator and the electrical connection.

5. Variations to suit different mounting areas Available with lead and leadless type of terminations (for opposing FPC insertion side).

6. Designed for placement with automatic equipment

Flat top surface allows pick-up with vacuum nozzles.

Packaged in embossed tape, on reel. One reel contains 2,500

7. Accepts 0.2mm thick FPC

8. Variety of contact positions

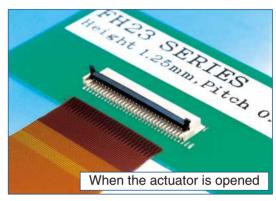

Available with 15,17,21,23,25,27,31,33,37,39,45,51,61and 71

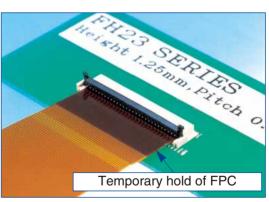

9. Halogen Free

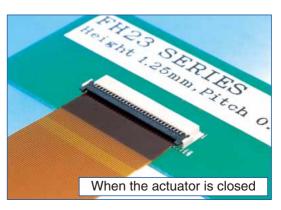

The connector does not use chlorine and bromine exceeding standard limits.

*Defined in accordance with IEC61249-2-21

Br 900ppm or lower, Cl 900ppm or lower, Br + Cl 1,500ppm or

■Connector Operating Instructions, precautions and recommendations

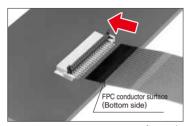

Operation

1.FPC Termination procedure. Connector installed on the board.

1) Lift up the actuator. Use thumb or index finger.

2) Fully insert the FPC in the connector parallel to mounting surface, with the exposed conductive traces facing down.

photo 3

3) Rotate down the actuator until firmly closed. NOTE: The FPC must be fully inserted in the connector. If not fully inserted, the actuator will not close properly. Should this be the case, lift up the actuator (per Step 2 below) and repeat the process (starting with Step 1 above)

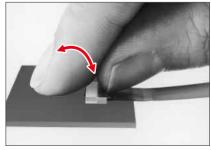

4) For connectors with multiple contacts, such as 61 and 71 pos. rotate down the actuator pushing at both ends.

2.FPC Removal

- 1) Lift up the actuator.
- 2) Carefully remove the FPC.

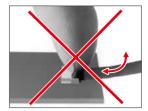

■Connector Operating Instructions, precautions and recommendations

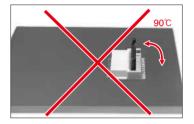

Precautions

1) Do not apply excessive force or use any type of tool to operate the actuator.

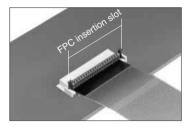

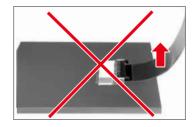

2) The connector will assure reliable performance when the actuator is open to 90° maximum Do not exceed this angle, as this may cause permanent damage to the connector.

3) Properly insert the FPC at the positioning part of the connector. Locking the FPC while it is partially inserted, may cause lock damage, disconnection of the FPC, or continuity fault.

4) Do not apply force in the upward direction (as illustrated). Do not bend the FPC too close to the actuator.

5) When inserting the FPC, do not forcefully rub against the bottom surface of the connector insertion entrance. Doing so will result in the contacts and FPC making strong contact and may cause deformation of the contacts, peeling of the FPC conductor, and other problems.
